Credit Card – Weekly Dashboard

Power BI Dashboards: Credit Card Insights That Drive Action

Dashboards

- **Customer Card Transaction Dashboard**
- **Customer Card Customer Dashboard**

Credit card data is often just a mess of numbers no one wants to deal with.

But what if I told you those numbers could reveal who's spending big, which cards are most profitable, and even how different users swipe differently?

That's exactly what these two Power BI dashboards deliver.

I took raw transaction data—the kind that usually makes eyes glaze over—and **turned it into clear, clickable insights.**

You'll uncover:

- Businessmen spent \$17M, while retirees spent just \$5M
- Blue cards generated 46x more revenue
- High-income men spent 3x more than women

How I built it

- Pulled raw data from GitHub (CSV)
- Cleaned it in PostgreSQL
- Visualized it in Power BI
- Published back to Notion with full documentation

These dashboards give real, actionable intel banks and businesses can use to boost profits.

So, if you've ever wondered where all that credit card money really goes...
Now you know where to look.

Key Questions Answered:

1. **Which card type** (Blue, Silver, or Gold) brings in the most revenue and is used most often?
2. **How do spending habits vary** by age, gender, income level, or marital status?
3. **Which job types or income groups** spend the most on credit cards?
4. **Which states or cities** have the highest transaction volumes or spending totals?
5. **Are there seasonal trends** in spending based on card types?
